Red Manpower Pool For Science Study Getting Larger

ESTES PARK, COLO., Sept. 13 (UPI) — A Central Intelligence Agency official said yesterday Russia will have a manpower pool for scientific research 30 per cent greater than America's in five years.

He said the USSR's scientific manpower backlog is now 15 per cent greater.

The statement was made by Dr. Donald F. Chamberlain, chief of the fundamental science division in the CIA office of scientific intelligence.

Chamberlain declined to make comparison between Russia and the U.S. in the general field of scientific endeavor. But he said that in areas where the Russians "have put their best planners, best research and best brains, they have achieved amazing results."

Chamberlain made his remarks at the closing session of the 12th national conference on the Administration of Research.
